                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences of 444 novel human proteins. These were isolated from expressed sequences tags (ESTs). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. parkinson's disease. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tang

These can be used in the treatment of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders and inflammation. The present sequence is a protein of the invention.

The present invention relates to the isolation of novel human enzyme copypeptides, and the cDNA (AAS40785-AAS41684) and genomic sequences concoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyses, isomerases or ligases. The sequences of the invention are useful in the clisomerases or ligases. The sequences of the invention are useful in the clisomerases including hyperproliferative disorders (e.g. cancer), communodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. carcin), cc (e.g. arthritis), neurological disorders (e.g. Alzheimer s disease), cometabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), cometabolic disorders (e.g. henylketonuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. affilmanza). The polynucleotides of the invention can also be used in gene therapy.

AAUZ2915-AAUZ3814 represent the novel human enzyme polypeptides of the
                                                                                                                                                                                                                                                                                                                          Claim
                                                                                                                                                                                                                                                                                                                                                                Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             05-DEC-2000;
05-DEC-2000;
                         invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2001-465566/50.

The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater. diversity of probes for measuring gene expression, with far less blas than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of printed specification, but was obtained in electronic format from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this pattent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        27-SEP-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to the improved expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published pct sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                            genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim

The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of

The operon contains the gro-1 gene (AAX36072), the gop-2 gene (AAX36075), the gop-2 gene (AAX36075), the gop-2 gene (AAX36075), and the hap-1 gene (AAX36077). The gro-1 gene can be used in a method for the diagnosis and/or prognosis of cancer in a patient. Transgenic mice containing a gene knock-out of a murine gene homologue of the gro-1 gene are useful as models of aging and cancer. The proteins encoded by the genes are useful for identifying compounds that affect the enzymatic activity of these proteins in order to enhance longevity of a host and inhibit tumour formation. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the

The peptide can have neutrophil and/or monocyte/macrophage stimulatory activity. The peptide is derived from the sequence of tumour necrosis factor (TNF) derived peptide 419 (PSTHYLITHTI; see AU/4762/91 and 44664/93). It can have improved properties such as increased potency, extended in vivo half life or, particularly, specificity of action. It can have neutrophil stimulatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AIDS, cancer, diabetes, nosocomial infection, tuberculosis, cystic fibrosis, community acquired pneumonia, meningitis, Mycobacteria, Chlamydia, Brucellae, Francisella, Pasteurellosis, Legionellosis, Histoplasmosis, Listeriosis, Pneumocystis carnii, Trypanosoma cruzi, coccidian parasitical infection, an inherited primary neutropenic disorder, an inherited primary defect of phagocytic cell function, an acquired inherited secondary defect of phagocytic cell function, an acquired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 4; Page 44; 65pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         c (PSTHVLITHTI; see AU74762/91 and 44664/93). It can have improved properties such as increased potency, extended in vivo half life or, activity (class 1), equal neutrophil and monocyte/macrophage stimulatory activity (class 1), or preferentially enhanced monocyte/macrophage stimulatory activity (class 3). It can be used for the treatment or prevention of infections. In particular, it can be used for treating AIDS, cancer, diabetes, nosocomial infection, tuberculosis, cystic fibrosis, community acquired pneumonia, meningitis, Mycobacteria, Chlamydda, Brucellae, Francisella, Pasteurellosis, Listeriosis, Pneumocystis carnii, Trypanosoma cruzi, coccidian parasitical infection, an inherited primary defect of phagocytic cell function, an acquired disorder, an inherited primary defect of phagocytic cell function, an acquired condensative function, an acquired of the condensative function, an acquired condensative function function, an acquired condensative function function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29-OCT-1996;

The peptide can have neutrophil and/or monocyte/macrophage stimulatory activity. The peptide is derived from the sequence of tumour necrosis factor (TNF) derived peptide 419 (PSTHVLITHTI; see AU74762/91 and 44664/93). It can have improved properties such as increased potency, extended in vivo half life or, continuity (class 1), equal neutrophil round monocyte/macrophage stimulatory activity (class 2), or preferentially enhanced monocyte/macrophage crimitatory activity (class 3). It can be used for the treatment or prevention of infections. In particular, it can be used for treating AIDS, cancer, diabetes, nosocomial infection, tuberculosis, cystic chirosis, community acquired pneumonia, meningitis, Mycobacteria, community acquired pneumonia, meningitis, Legionellosis, in particular, Pasteurellosis, Legionellosis, acquired for treating acqu
